THE TECHNOLOGY

I chose **SpringSuiteTool** for my IDE.

- I use JAVA & JavaScript programming language.
- For data base i use MySQL
- For frontend i use Thymeleaf
- And i use Springboot framework

THE CODE

Short description of the Java code i build

HOW MY SRC/MAIN/JAVA LOOK

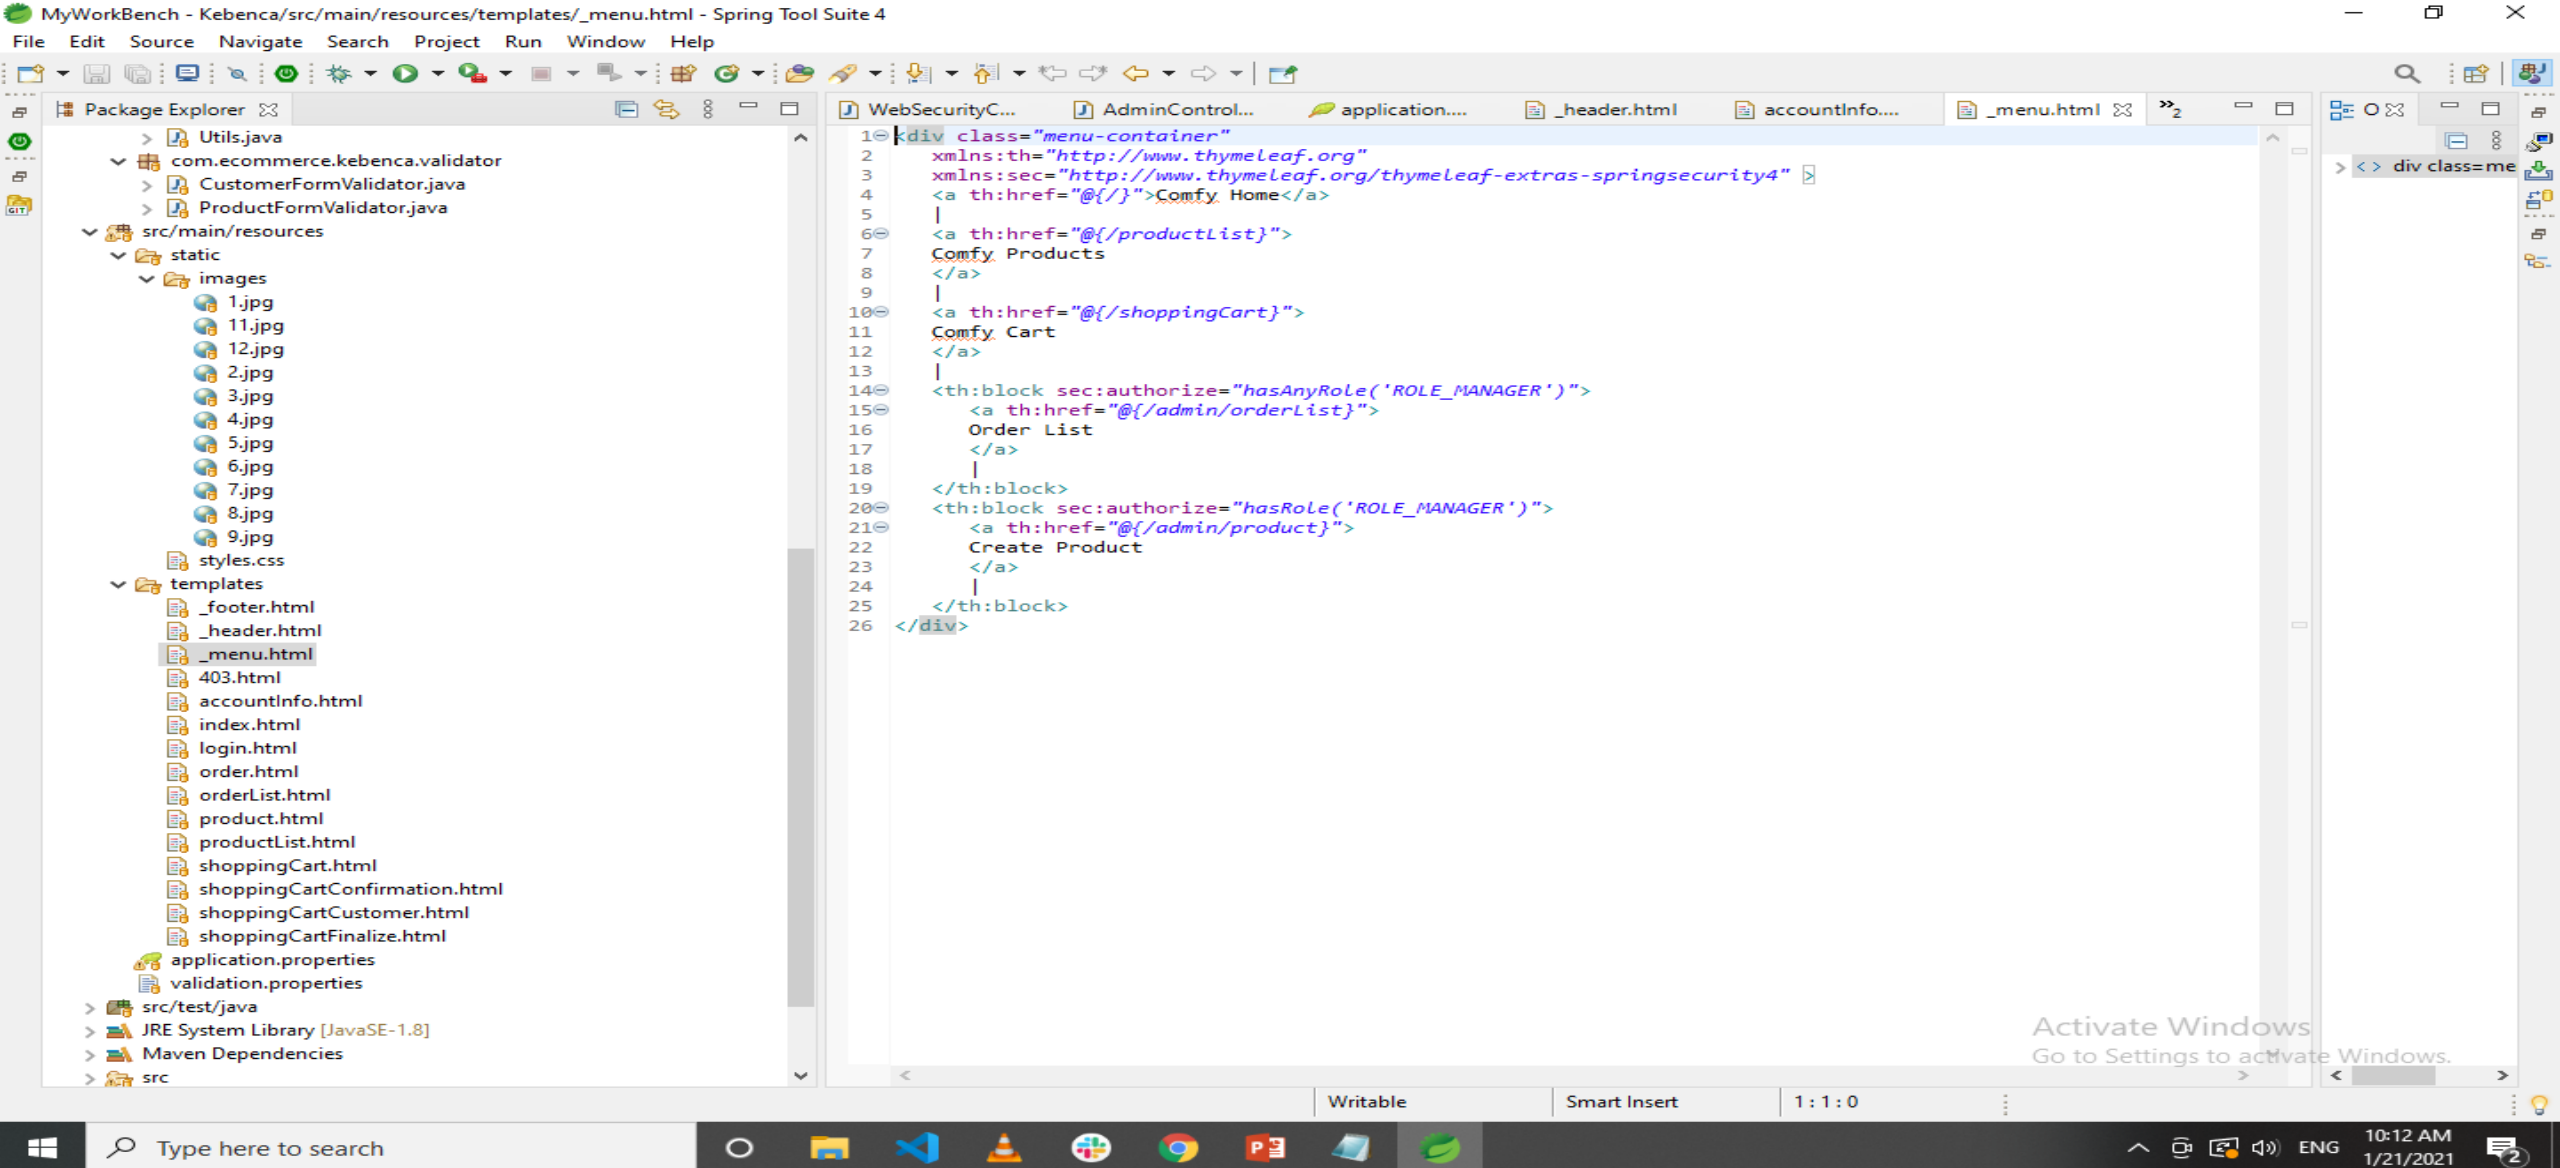

The screenshot displays the Spring Tool Suite 4 IDE interface. On the left, the Package Explorer shows the project structure for 'Kebenca'. The 'src/main/resources' directory is expanded, revealing a 'static' folder with 'images' and 'styles.css', and a 'templates' folder with various HTML files. The 'application.properties' file is selected and highlighted in blue. The main editor on the right displays the contents of this file, which is a Spring configuration file. It includes settings for the Spring Thymeleaf cache, the database connection (MySQL), logging levels, and email properties. The status bar at the bottom indicates the current file is 'application.properties - Kebenca/src/main/resources'.
